Some Good Resources for NNDL

- Elizabeth DePoy, “Introduction to Research”, 7th Edition, Elsevier, 2015.
- C. R. Kothari, “Research methodology”, New Age International Publishers, 2004.
- Rupinder Tewari & Mamta Bhardwaj “Intellectual Property: A Primer for Academia”, Punjab UNiversity, 2021.

Organization

- What is a patent?
- Significance of patenting
- What is a publication?
- Significance of publishing
- Patenting vs publishing
- Steps for patenting
- Steps for publishing

What is a Patent?

- **Intellectual Property** : Intellectual property (IP) refers to creations of the mind, such as inventions; literary and artistic works; designs; and symbols, names and images used in commerce.
- A patent is an exclusive right granted for an invention.
- Patents benefit inventors by providing them with legal protection of their inventions.
- With this they may go for commercial exploitation
- Either get royalty or develop technology and transfer

Significance of Patenting

- You invest your hard earned money to buy stocks, mutual funds, gold or real estate with hope for growth and financial independence
- Getting financially rewarded for your intellectual invention or innovation
- Thus GenZ can treat patenting as another investment
- Apply your mind or intellect to create something unique or different compared to existing one.
- You should be clear on what is unique in your invention.
- In the era of DeepTech technologies, patenting becomes important.

What is Publication?

- Article that documents novel findings on a particular research exploration
- Done research exploration and enough novel findings that warrant publication
- Systematic organization, linking to existing work, hypothesis, describing proposed work that suits specialists in the field, experimental results, discussion, summary and conclusions

Significance of Publication?

- Two fold intentions: documenting workdone till that point, getting feedback from anonymous reviewers
- Former helps while writing thesis - enough material to describe the work while writing thesis - done much later
- Later helps to know whether our hypothesis is indeed correct or not - independent researchers in the same or related field to give unbiased comments and highlight any missing links or expts or fallacy in hypothesis

Patenting vs Publishing

- Both involve invention or innovation
- New knowledge creation
- Patenting objective is commercial exploitation
- Publishing is knowledge sharing to further the chosen field without commercial objective
- Profitable private limited vs social enterprise
- Corporate vs academia
- Now academia also go in the sustainable model and hence look for avenues to generate revenue
- Patenting is one such long term investment
- First patent (provisionally) and then publish

Steps for Patenting

- Prior-art search
- Drafting - scientific / technical and legal
- Geographical region for commercial exploitation
- Application to patenting agency
- Provisional patent
- After due verification granting patent
- Agencies to help out
- Involves cost
- See possibility of commercial exploitation and go for patenting

Steps for Publication

- Top tier venues only (Q1)
- Conference or journal - depends amount of novelty & urgency of reporting novel direction
- Journal article is always preferred - good review, helps in further improving work & may get ideas for next work
- Conference article to quickly register new idea in the literature and also presenting in front of peers in the field
- Pitfalls - let me first publish low tier venue and then aim for top tier - seldom happens; conference and then journal extn
- Top tier acceptance rate is low / review process long - worth it
- Start early, drive safely and reach destination as per schedule

Steps for Conference Publication

- Top tier venues only (Q1)
- Research exploration completed
- Results as per hypothesis
- Good novel idea and wants to register in the literature (like provisional patent)
- Exhaustive experimentation may not be required - like in journal
- Assumption that author will present work
- Title, abstract, introduction, state-of-the art, proposed work, experimental results and discussion, summary and conclusions

Steps for Journal Publication

- Top tier venues only (Q1)
- Research exploration completed
- Results as per hypothesis, enough experiments are carried out for generalization
- Enough novel ideas and wants to explain in a detailed manner (like patent)
- Exhaustive experimentation is required
- Assumption that author will present work is not there - hence detailing out
- Title, abstract, introduction, **literature review**, state-of-the art - theory, experiments, benchmark, proposed work - under varied conditions, experimental results and discussion, summary and conclusions

Summary of Patenting and Publishing

- Patent vs publication
- Significance of patenting and publishing
- Steps for patenting
- Steps for publishing

Thank You
